

SCSA TSP X CHASSIS

SAFETY WARNING: Before commencing any work or modifications on your rifle, make sure your rifle is UNLOADED. Before starting with the assembly procedure of this product, REMOVE the BOLT and MAGAZINE from the rifle.

ASSEMBLING YOUR SCSA TSP X CHASSIS

Step 1: Remove the action from the current stock/chassis

1. Loosen and remove the action screws holding the action in.
2. Pull the action away from the stock.

Step 2: Install the receiver/action to the chassis inlet

1. Invert receiver/action and align TSP X chassis inlet above it.
2. Insert and lightly secure the front and rear action screws.
3. Torque the rear action screw to spec, then follow with the front action screw.

Step 3: Install trigger guard and front adapter

1. Slot trigger guard into the inlet ensuring the trigger guard is homed towards the buttstock. Secure with provided screws.
2. Attach forward adapter with the provided screws.

Step 4: Install buttstock, forend and grip

1. Secure butt stock to chassis inlet with the provided screw.
2. Secure forend to chassis inlet with the provided screws.
3. Secure A2 grip (or aftermarket grip of your choice) to the trigger guard using the 1/4x1" socket head cap screw.
